A B S T R A C T

10 The invention relates to a device for transmitting
video data, comprising
- a host device (10),
- a remote device (12), and
- a data link (14) between the host device (10) and
15 the remote device (12), wherein
said host device (10) comprises adjusting means (18)
which are provided to reduce the data rate of video
data transmitted from a video data source (16) to the
host device (10) by reducing the frame rate of the
20 video data, which enables the host device (10) to
transmit the video data at the reduced data rate to the
remote device (12) via the data link (14).
